

QA Pairs for Video Data

Clip 1 ([Link](#))

QA Pair 1: What happens immediately after the ball first touches the ramp?

- A. It smoothly rolls up the ramp without interruption (Correct)**
- B. It stops moving entirely
- C. It bounces upward into the air and begins spinning
- D. It rolls backward away from the ramp

QA Pair 2: At what point does the ball begin spinning?

- A. While rolling toward the ramp
- B. While it is airborne after bouncing off the ramp (Correct)**
- C. Before it reaches the ramp
- D. After it reaches the top of the ramp

QA Pair 3: How does the ball continue moving after it lands back on the ramp?

- A. It continues moving upward along the ramp (Correct)**
- B. It rolls back down the ramp
- C. It stops due to losing momentum
- D. It bounces repeatedly in place

Clip 2 ([Link](#))

QA Pair 1: What unusual events occur while the toy car is moving across the surface?

- A. It slows down gradually and stops
- B. It turns left sharply
- C. It flips into the air before landing back (Correct)**
- D. It starts moving backward

QA Pair 2: When does the toy car become upside down?

- A. At the very beginning before it starts moving
- B. While it is in mid-air during the flip (Correct)**
- C. After it reaches the end of the surface
- D. While it is rolling normally on the ground

QA Pair 3: How does the car behave after landing back on the surface?

- A. It stops moving due to the impact
- B. It flips again multiple times

- C. It reverses direction and rolls backward
- D. **It continues moving forward in the same direction as before (Correct)**

Clip 3 ([Link](#))

QA Pair 1: What happens when the boy tries to ride the bicycle onto the stairs?

- A. He smoothly rides up the stairs without stopping
- B. **He loses balance and falls (Correct)**
- C. He jumps over the stairs with the bicycle
- D. He turns away from the stairs at the last moment

QA Pair 2: At what moment does the boy lose his balance?

- A. **Right as the front wheel reaches the first stairs (Correct)**
- B. After he reaches the top of the stairs
- C. While riding steadily on the flat path
- D. Before he approaches the stairs

QA Pair 3: What does the bicycle do immediately after the boy falls?

- A. It continues rolling up the stairs
- B. It bounces down the steps
- C. **It tips over and falls to the side (Correct)**
- D. It remains perfectly upright

Clip 4 ([Link](#))

QA Pair 1: What happens when the girl brings the baseball bat back during her swing?

- A. She cleanly completes the backward motion without hitting anything
- B. **The bat strikes a ceiling light, causing it to break (Correct)**
- C. She drops the bat on the floor
- D. She accidentally hits the wall behind her

QA Pair 2: Where does the impact occur when the bat causes damage?

- A. On the floor beneath her
- B. On the wall behind her
- C. **On the ceiling light above her (Correct)**
- D. On a nearby piece of furniture

QA Pair 3: What happens immediately after the bat hits the light?

- A. **The light breaks, and pieces fall downward (Correct)**
- B. The girl continues swinging without noticing anything

- C.** The bat bounces back and flies out of her hands
- D.** The ceiling shakes but nothing breaks
